

Inside Swiggy's Kitchen of Data

Analyzing food delivery patterns using SQL

Presented by
Vaishnavi Chakraborty

SWIGGY DATA ECOSYSTEM

Ingredients of the Swiggy Dataset

- Customers ,Restaurants complaints
- deliverypartners , deliveryupdates
- feedback , MenuItem , OrderItem
- Orders , Payments , OrderDelivery

Delhi-based customers actively using the Swiggy platform

```
-- Display all customers who live in 'Delhi'.  
SELECT  
    *  
FROM  
    deliverypartners  
WHERE  
    city = 'Delhi';
```

Delhi has a limited number of registered customers in the dataset, suggesting early-stage presence and opportunities for market growth and customer acquisition.

Average restaurant ratings across Mumbai's food ecosystem

```
-- Find the average rating of all restaurants in 'Mumbai'.  
SELECT  
    *  
FROM  
    restaurants;  
SELECT  
    ROUND(AVG(rating)) avg_rating  
FROM  
    restaurants  
WHERE  
    city = 'Mumbai';
```

Mumbai restaurants show a high average rating of 4, highlighting strong customer satisfaction and reliable service quality.

List all customers who have placed at least one order

```
--  
34  -- List all customers who have placed at least one order.  
35  
36 • SELECT  
37     c.name, c.customer_id, COUNT(o.order_id) total_orders  
38 FROM  
39     customers AS c  
40     INNER JOIN  
41     orders AS o ON c.customer_id = o.customer_id  
42 GROUP BY c.customer_id  
43 ORDER BY total_orders;  
44
```

Mumbai restaurants show a high average rating of 4, highlighting strong customer satisfaction and reliable service quality

Revenue Contribution by Restaurant Partners

```
45  -- Find the total revenue generated by each restaurant.  
46  
47 • SELECT  
48     restaurant_id, SUM(total_amount) AS total_revenue  
49 FROM  
50     orders  
51 WHERE  
52     status = 'completed'  
53 GROUP BY restaurant_id;  
54
```

The revenue distribution shows a clear imbalance among restaurant partners. While Restaurant 1 and 2 generate relatively modest revenue, Restaurant 3 stands out as a top-performing partner with significantly higher earnings.

Find the top 5 restaurants with the highest average rating

```
55 -- Find the top 5 restaurants with the highest average rating.
56 • SELECT
57     name, ROUND(AVG(rating), 2) AS avg_rating
58 FROM
59     restaurants
60 WHERE
61     rating IS NOT NULL
62 GROUP BY name
63 ORDER BY AVG(rating) DESC
64 LIMIT 5;
65
```

Biryani-centric restaurants dominate the top ratings, indicating strong customer satisfaction and cuisine-driven loyalty on the platform.

Display all customers who have never placed an order

```
66 -- Display all customers who have never placed an order.
67
68 • SELECT
69     c.customer_id, c.name, COUNT(o.order_id) total_orders
70 FROM
71     customers AS c
72     LEFT JOIN
73     orders AS o ON c.customer_id = o.customer_id
74 GROUP BY c.customer_id
75 HAVING COUNT(o.order_id) = 0
76 ORDER BY total_orders;
77
```

The analysis reveals three registered customers who have never placed an order on the Swiggy platform.

Find the number of orders placed by each customer in Mumbai

```
78      -- Find the number of orders placed by each customer in 'Mumbai'.
79 •    SELECT
80      c.customer_id, c.name, COUNT(o.order_id) AS total_orders
81  FROM
82      customers c
83      LEFT JOIN
84      orders o ON c.customer_id = o.customer_id
85  WHERE
86      c.city = 'Mumbai'
87  GROUP BY c.customer_id , c.name
88  ORDER BY COUNT(o.order_id) DESC;
89
```

Mumbai customers demonstrate steady order activity, with one highly active user and others showing consistent engagement.

Display all orders placed in the last 30 days

```
90
91      -- Display all orders placed in the last 30 days.
92 •    SELECT *
93  FROM Orders
94  WHERE order_date >= (
95      SELECT DATE(MAX(order_date) - INTERVAL 30 DAY) FROM Orders
96  )
97  ORDER BY order_date DESC;
98
```

Orders in the last 30 days reflect steady customer demand with a 100% completion rate, indicating operational stability.

High-Performing Delivery Partners

```
99  -- List all delivery partners who have completed more than 1 delivery
100 • SELECT * FROM deliverypartners;
101 • Select * from orderdelivery;
102
103 • select dp.partner_id,dp.name,count(od.order_delivery_id) as delivery_count
104   from deliverypartners as dp
105  left join
106  orderdelivery as od
107   on dp.partner_id=od.partner_id
108  group by dp.partner_id,dp.name
109  having count(od.order_delivery_id)>1
110  order by count(od.order_delivery_id) desc;
```

The results highlight a group of delivery partners who consistently handle multiple orders, with Suresh Reddy emerging as the most active partner.

Find the customers who have placed orders on exactly three different days

```
112 -- Find the customers who have placed orders on exactly three different days.
113 • SELECT * FROM orders;
114 • SELECT *FROM customers;
115 • SELECT
116     c.customer_id,
117     c.name,
118     COUNT(DISTINCT DATE(o.order_date)) AS unique_order_days
119 FROM Orders o
120 JOIN Customers c
121     ON o.customer_id = c.customer_id
122 GROUP BY c.customer_id, c.name
123 HAVING COUNT(DISTINCT DATE(o.order date)) = 3;
```

Customers with orders on exactly three different days reflect steady engagement and strong retention potential.

Delivery Partner with the Widest Customer Reach

```
SQL* JOINS USING OTT PLATFORM* LIKE OPERATOR USING OTT... LIMIT-OFFSET* WINDOWS FUNC
Limit to 50000 rows
125 -- Find the delivery partner who has worked with the most different customers.
126 • select * from orderdelivery;
127 • select * from orders;
128 • select * from deliverypartners;
129 • select dp.partner_id,dp.name,count(distinct o.customer_id) customer_count
130 from orderdelivery od
131 join deliverypartners dp
132 on od.partner_id=dp.partner_id
133 join orders o
134 on o.order_id=od.order_id
135 group by dp.partner_id,dp.name
136 order by count(distinct o.customer id) desc ;
```

Suresh Reddy emerges as the most widely engaged delivery partner, serving the highest number of distinct customers.

Identify customers who have the same city and have placed orders at the same restaurants, but on different dates

```
138 -- Identify customers who have the same city and have placed orders at the same restaurants, but on different dates.
139 • select * from customers;
140 • select * from restaurants;
141 • select * from orders;
142 • SELECT DISTINCT c1.customer_id customer_1, c1.name, c2.customer_id customer_2, c2.name, c1.city, r.name
143 FROM orders o1
144 JOIN
145 orders o2 ON o1.restaurant_id = o2.restaurant_id
146 JOIN
147 customers c1 ON o1.customer_id = c1.customer_id
148 JOIN
149 customers c2 ON o2.customer_id = c2.customer_id
```

Navigator: SCHEMAS
Filter objects
classmodels
Tables
Views

complaints
customers

```
147 customers c1 ON o1.customer_id = c1.customer_id
148 JOIN
149 customers c2 ON o2.customer_id = c2.customer_id
150 JOIN
151 restaurants r ON o1.restaurant_id = r.restaurant_id
152 WHERE
153 c1.city = c2.city
154 AND c1.customer_id < c2.customer_id
155 AND DATE(o1.order_date) <> DATE(o2.order_date);
156
157
```

Customers within the same city show overlapping restaurant choices, indicating strong local food preferences and repeat demand patterns.

Business Growth Ideas

1. City-Focused Marketing

Target high-activity cities like Mumbai and Delhi with location-specific offers and popular restaurant promotions.

2. Reactivate Inactive Users

Engage customers with zero orders using first-order discounts and personalized notifications.

Business Growth Ideas

3. Retain Repeat Customers

Reward customers who order on multiple days through loyalty points and repeat-order offers.

4. Optimize Delivery Partner Performance

Recognize top delivery partners and balance workloads to ensure faster and more reliable deliveries.
